

## The TDI 140-5 Marine Engine

Five cylinders, 2,5 litre engine capacity, 140 hp direct injection with electronic engine management (MDC) and extremely low weight per horsepower: That is our Sailing yacht and displacement cruiser specialist.

This exceptionally sturdy and refined 5 cylinder draws its power, among other factors, from a turbocharger with variable turbine geometry (VTG-charger) and from intercooling. The engine will brighten your day with a torque of 310 Nm at any speed between 1700 and 3100 rpm, with low fuel efficiency and minimum emissions.

For sailing yachts and displacement cruisers we have developed a mid speed version of the 5 cylinder with 3.400 rpm. This allows comfortable cruising with low engine speed

Easily meets EU standards and all expected future emission standards for marine engines.
